

Amendments to the Specification:

Please replace ¶1 on page 5 with the following amended paragraph:

A
Referring simultaneously to Figures 2A through 2F, illustrated therein are various databases tables of information stored within the catalog database 22. Typically catalog database 22 will include a catalog entry table 500, a product attribute table 502, a product attribute value table 504, a package attribute table 506, a package attribute value table 508 and a package relationship table 510.

Please replace ¶1 on page 12 with the following amended paragraph:

A2
Once the selected catalog entry identifiers 550 have been determined for the selected products 520, the resolution module 20 then matches the selected catalog entry identifiers 550 with the component identifiers 604 ("selected component identifiers") in the package relationship table 510. If a package identifier 600 can be located in the relationship table 604-510 which correlates to all of the selected component identifiers 604, the catalog entry identifier 550 matching the selected package identifier 600 is then added to the customer's 26 shopping cart, as will be understood. If such an acceptable package identifier 600 cannot be located in the table 510, the resolution module 20 will direct the consumer 26 to either redesignate acceptable attribute values 574 or will reject the selection of the unresolved package 526. (Block 720)
